Bali property market report
H1 2026

EXECUTIVE SUMMARY

Welcome to the REID 2026 H1 Bali Property Market Report; your comprehensive, data-led overview of Bali's residential property sector.

2026 confirms a structural shift that first emerged through 2025: the market is moving from speculative, smaller-format development toward established, larger-footprint assets. Supply growth has slowed as developers pull back from new launches, while buyer demand continues to consolidate around larger, completed properties rather than off-plan or compact stock.

On the supply side, 2,500 new properties entered the market in H1 2026, a modest addition against a base of over 10,000 available listings. The apartment segment's relative market share fell 7% as fewer new apartment projects broke ground, and off-plan stock's share of new supply eased to 20%, well below prior cycles. Off-plan concentration remains heavily skewed toward one to three bedroom formats, which make up 90% of all off-plan inventory, underlining that the pullback in new development is being felt most at the smaller, more speculative end of the market.

Sales activity softened further, with total transaction volume down 21% year-on-year to 4,220. That decline was not evenly spread: one-bedroom properties' relative share of sales fell 19%, off-plan sales share fell 26%, and apartments' share of sales fell 13%. The available (completed) share of sales rose from 50% to 63% year-on-year, and villas' share climbed from 87% to 90%. Together, these shifts describe a market rotating away from smaller, emerging, off-plan product and toward larger, established, ready-to-use assets.

This compositional shift is the primary driver behind 2026's headline pricing figure: median prices rose 3.1% year-on-year, even as overall transaction volume declined. With small,

off-plan and apartment sales pulling back in relative terms, the sales mix has tilted toward larger, higher-value completed villas, lifting the median without requiring like-for-like price appreciation. Average price per square metre eased 5% to \$1,975/sqm, with apartments seeing an 8% decline to \$3,060/sqm, while average property sizes grew across the board, including a 15% increase for one-bedroom units and an 18% increase in South Badung, a market-wide push toward larger, more efficient footprints even at the compact end.

Rental performance tells a more nuanced story. Total rental supply grew 5% year-on-year to 44,750 properties, indicating that concerns around a regulatory-driven contraction in the rental market have not materialised. Occupancy also improved, with the average market rate reaching 52% (up a relative 10% year-on-year) as tourism demand continues to support the sector. However, growing supply and intensifying competition for guests have placed sustained pressure on rates: the average daily rate fell 23% to \$125, and total rental revenue declined 16% to \$544 million. Assets are filling more often but earning less per booking, as operators compete more aggressively for share.

Overall, 2026 so far reflects a market in transition rather than contraction: supply discipline, a rotation toward established assets, and resilient occupancy sit alongside softer transaction volumes and intensifying rental competition. The result is a more mature, selective market, where fundamentals are increasingly shaped by product quality and positioning rather than broad-based growth.

Continue reading for a detailed breakdown of these developments across H1 2026. Happy reading!

– **REID** Team

H1 2026 SUPPLY VOLUME BY REGION

H1 SUPPLY TRENDS

Supply trends in 2026 point to continued discipline in new development, building on the consolidation seen through 2025. Just 2,500 new properties entered the market in the first half of 2026, a modest addition against a total available stock of 10,885 listings. North Badung remains the largest contributor to supply at 35% of volume, followed by South Badung at 22%, while Denpasar accounts for the smallest share at 3%.

The apartment segment's relative market share fell 7% as fewer new apartment developments launched, reinforcing the market's continued tilt toward land-based, villa-led supply. Leasehold properties continue to dominate at 82% of total inventory, consistent with the structural ownership constraints that have long shaped Bali's residential market.

10,885

Available properties

82%

Leasehold market share

- Three and two-bedroom properties continue to anchor market supply, with 3,150 and 2,942 listings respectively, together accounting for more than half of all available stock. This reflects sustained developer confidence in mid-sized formats that appeal to both investors and end users.
- Larger configurations remain comparatively scarce, with five and six-bedroom supply at just 834 and 321 listings. The tapering of supply at scale reinforces the market’s continued focus on efficient, mid-market product rather than large, land-intensive assets.

H1 2026 PROPERTY SUPPLY BY BEDROOM

2,500

2026 new properties

-7%

Apartment segment relative market share

- Available (completed) stock now represents 65% of total supply, indicating that developers continue to prioritise the absorption of existing inventory over the launch of new off-plan projects.
- Villas retain a commanding 89% share of total supply, with apartments at 11%. The 7% decline in the apartment segment’s relative market share reflects a slowdown in new apartment launches, consistent with reduced developer appetite for higher-density, off-plan product.

H1 2026 PROPERTY SUPPLY DEVELOPMENT STATUS & PROPERTY TYPE

-5%

Off plan properties market share

20%

Off plan properties share of new properties 2026

- Off-plan properties’ market share fell 5% year-on-year and now accounts for just 20% of new supply entering the market in 2026, down markedly from prior years. This points to a more cautious, selective approach to new project launches.
- The apartment segment remains far more exposed to off-plan risk than villas, with 75% of apartment supply still under construction compared with 30% for villas. This concentration means the apartment segment’s near-term performance is closely tied to delivery timelines and absorption of the existing pipeline.

H1 2026 PROPERTY SEGMENTS BY DEVELOPMENT STATUS

90%

1-3 Bedroom share of total off plan properties

29%

3 Bedroom market share of total supply

- Off-plan stock remains heavily concentrated in compact formats, with one to three bedroom properties accounting for 90% of all off-plan inventory. Three-bedroom properties alone represent 29% of total supply, the single largest category in the market.
- Larger configurations show markedly lower off-plan exposure, with five and six-bedroom stock predominantly available and completed. This split suggests developers are more willing to pre-sell smaller, faster-turnover product, while larger assets typically come to market only once built.

H1 2026 DEVELOPMENT STATUS BY BEDROOM CATEGORY

H1 2026 SALES VOLUME BY REGION

H1 SALES TRENDS

Sales activity in 2026 continued to moderate, with total transaction volume down 21% year-on-year to 4,220. North Badung remained the leading region by sales volume at 32%, followed by South Badung at 26%, while the smallest shares were recorded in Central Badung and Denpasar at 5% each.

The composition of sales tells the more important story. One-bedroom properties' relative share of transactions fell 19% year-on-year, while two and three-bedroom assets together accounted for 58.3% of sales volume. The available (completed) share of transactions rose from 50% to 63%, and villas increased their share of sales from 87% to 90%, confirming a continued rotation away from smaller, off-plan product and toward larger, established assets.

-19%

1 Bedroom relative share of YoY sales

4,220

YoY total sales volume

-21%

YoY change

- 12 Month total sales volume fell 21% year-on-year to 4,220 transactions, continuing the moderation in transaction activity observed since 2025. Two and three-bedroom properties together accounted for 58.3% of all sales, confirming their position as the core of buyer demand.
- One-bedroom properties’ relative share of sales fell 19% year-on-year, the sharpest decline of any category. This continues the market’s rotation away from the smallest, most speculative product and toward assets with broader owner-occupier and rental appeal.

H1 2026 SALES VOLUME BY BEDROOM CATEGORY

REID

+3.1%

Median price YoY change

87%

Leasehold sales volume share

- Median prices rose 3.1% year-on-year, with freehold assets reaching a median of \$529k and leasehold assets \$293k. Larger freehold configurations recorded the strongest gains, with five and six-bedroom properties up 16.9% and 20.2% respectively, although from smaller sample sizes.
- Leasehold transactions continue to dominate the market, representing 87% of total sales volume. Pricing gains within leasehold were more evenly distributed across bedroom categories, suggesting broader-based demand rather than concentration in any single segment.

H1 2026 MEDIAN PRICE BY OWNERSHIP TYPE

	FREEHOLD	YoY CHANGE	-	LEASEHOLD	YoY CHANG
1 BED	\$208k	2%		\$168k	+5%
2 BED	\$326k	9%		\$249k	+1.4%
3 BED	\$455k	-4%		\$356k	+2.9%
4 BED	\$857k	2.6%		\$580k	+9.3%
5 BED	\$1.351M	16.9%		\$869k	+9.3%
6 BED	\$1.727M	20.2%		\$850k	+6.3%
MEDIAN	\$529k	4.7%	REID	\$293k	+4.4%

-26%

Off plan properties relative sales share YoY

-13%

Apartments relative sales share YoY

- Off-plan properties’ relative share of sales fell 26% year-on-year, with the available-to-off-plan sales split moving from an even 50/50 in 2025 to 63/37 in favour of completed stock in 2026. Buyers are increasingly favouring ready-to-use assets over pre-construction purchases.
- Apartments’ relative share of sales fell 13% year-on-year, with villas now accounting for 90% of transactions, up from 87% a year earlier. This reinforces the broader shift toward land-based, established product across the market.

H1 SALES VOLUME BY DEVELOPMENT STATUS & PROPERTY TYPE

-20%

South Badung relative sales share YoY

1,340

North Badung 12-month total sales volume

- South Badung’s relative share of sales fell 20% year-on-year, even as the region continues to command some of the highest median prices in the market, particularly for larger configurations. North Badung remained the most active region by volume, recording 1,340 sales over the past 12 months.
- Regional pricing hierarchies remain largely intact, with Central and South Badung commanding premium pricing across most bedroom categories, while Tabanan and Denpasar offer comparatively lower entry points. Six-bedroom pricing shows the greatest regional variation, reflecting the bespoke nature of larger properties.

H1 2026 MEDIAN PRICE BY REGION & BEDROOM

REID	1 BED	2 BED	3 BED	4 BED	5 BED	6 BED
Central Badung	\$210k	\$244k	\$347k	\$465k	\$975k	\$672k

South Badung	\$183k	\$250k	\$355k	\$646k	\$810k	\$650k
Tabanan	\$157k	\$222k	\$281k	\$619k	\$783k	\$925k

+5.4%

Average time on market YoY change

220 Days

South Badung average time on market

- Average time on market increased 5.4% year-on-year to 256 days market-wide, reflecting the more cautious and selective buyer behaviour that has characterised transaction activity through H1 2026. Larger properties took longest to sell, with five-bedroom assets averaging 286 days.
- South Badung recorded the shortest average time on market at 220 days, below the market average, consistent with the region’s sustained buyer demand and premium positioning. The relatively narrow spread across bedroom categories suggests liquidity constraints are being felt broadly rather than concentrated in any one segment.

H1 2026 AVERAGE TIME ON MARKET

H1 2026 PRICE PER SQM BY REGION

H1 PROPERTY TRENDS

Property trends in the first half of 2026 reflect the market's ongoing shift toward larger, more efficient footprints. Average property size increased across nearly every segment, including a 15% rise for one-bedroom units and an 18% rise in South Badung, even as compact formats have historically anchored Bali's supply growth.

This growth in size has coincided with a mild softening in price per square metre, which eased 5% to an average of \$1,975. Apartments recorded the sharper decline, down 8% to \$3,060/sqm, suggesting that as larger footprints gain share, the premium once commanded by compact, high-density product is beginning to normalise.

+22%

Average off plan property size change YoY

85k sqm

12 month total new building sqm

-78%

YoY change

- Average off-plan property size grew 22% year-on-year, even as total new building volume fell sharply, down 78% to 85,000 sqm over the past 12 months. This indicates that while fewer projects are breaking ground, those that are launching are being built at on larger footprints.
- Freehold properties average 365 sqm, well above the market average of 230 sqm, while apartments remain the most compact segment at 74 sqm. The widening gap between freehold and leasehold, and between villa and apartment footprints, reflects the market’s continued bifurcation between premium, land-based assets and compact, entry-level product.

H1 2026 AVERAGE PROPERTY SIZE BY SEGMENT

+18%

Average South Badung property size change YoY

+15%

Average 1 bedroom property size change YoY

- Average property size in South Badung grew 18% year-on-year, among the strongest gains of any region, even as the area maintains some of the highest per-square-metre pricing in the market. This suggests buyers are willing to pay a premium for larger footprints in established, high-demand locations.
- Average one-bedroom property size grew 15% year-on-year, indicating that the push toward larger, more efficient layouts extends even to the smallest end of the market. Regional per-square-metre pricing continues to vary meaningfully, with Mengwi and South Badung commanding the highest rates across most bedroom categories.

H1 2026 AVERAGE PRICE PER SQM BY REGION & BEDROOM

REID	1 BED	2 BED	3 BED	4 BED	5 BED	6 BED
Central Badung	\$3,750	\$1,970	\$1,760	\$1,865	\$2,555	\$1,460
Denpasar	\$3,450	\$1,765	\$1,665	\$1,825	\$1,635	\$1,400
Gianyar	\$2,365	\$1,945	\$1,760	\$1,865	\$2,370	\$1,650
Mengwi	\$2,300	\$1,945	\$1,725	\$2,010	\$2,280	\$2,150
North Badung	\$2,535	\$1,910	\$1,850	\$1,900	\$2,125	\$2,030
South Badung	\$2,500	\$1,965	\$1,805	\$2,170	\$2,760	\$1,800
Tabanan	\$2,840	\$1,800	\$1,530	\$1,900	\$1,610	\$2,505

\$1,975

Average property price per sqm

- 5%

YoY change

\$3,060

Average apartment price per sqm

- 8%

YoY change

- Average price per square metre eased 5% year-on-year to \$1,975, a modest softening that aligns with the broader trend toward larger property sizes across the market. As footprints grow, per-square-metre values naturally moderate even where headline prices hold firm.
- Apartments recorded a steeper decline of 8% to \$3,060/sqm, the largest fall of any segment. This reflects both increased competition within the compact segment and a gradual normalisation of the premium once commanded by smaller, high-density product.

H1 2026 AVERAGE PRICE PER SQM BY REGION & BEDROOM

REID	1 BED	2 BED	3 BED	4 BED	5 BED	6 BED

H1 2026 RENTAL SUPPLY VOLUME BY REGION

H1 RENTAL TRENDS

Rental trends thus far in 2026 push back against concerns that regulatory changes would meaningfully shrink Bali's short-stay rental market. Total rental supply grew 5% year-on-year to 44,750 properties, with North Badung continuing to account for the largest share of rental stock at 45%.

Occupancy also strengthened, reaching an average of 52% across the market (up 10% year-on-year), supported by continued growth in tourism demand. However, expanding supply and intensifying competition for guests have weighed on pricing: the average daily rate fell 23% to \$125, and total rental revenue declined 16% to \$544 million, as operators increasingly prioritise occupancy over rate.

44,750

2026 Total rental properties

+5%

YoY total supply change

- Total rental supply grew 5% year-on-year to 44,750 properties, directly countering expectations that regulatory changes would meaningfully constrain the rental market. Supply has tracked consistently above 2025 levels across the past 12 months.
- North Badung continues to account for the largest share of rental stock at 45%, reinforcing its position as Bali’s primary short-stay rental hub. The sustained growth in supply, even amid regulatory uncertainty, signals continued operator confidence in the sector’s underlying demand.

12 MONTH PROPERTY SUPPLY VOLUME

52%

H1 2026 average market occupancy

+10%

YoY change

57%

H1 2026 1 bedroom average occupancy

+15%

YoY change

- Average market occupancy rose a relative 10% year-on-year to 52%, with one-bedroom properties recording the strongest performance at 57%, up a relative 15%. This continued improvement in occupancy, even as rental supply expands, points to sustained underlying demand from tourism.
- Regional performance was broadly positive, with Mengwi (60.5%) and Denpasar (56.9%) recording the largest year-on-year gains. Central Badung was the notable exception, with occupancy declining to 46.1% as increased competition within the region weighs on individual asset performance.

H1 AVERAGE OCCUPANCY BY REGION

\$125

H1 2026 average daily rate

-23%

YoY change

\$544M

H1 2026 total rental revenue

-16%

YoY change

- The average daily rate fell 23% year-on-year to \$125, as rising rental supply and intensifying competition for guests continue to place downward pressure on pricing across nearly every region. Central Badung recorded the highest rate at \$178, despite a steep decline from 2025 levels.
- Total rental revenue declined 16% year-on-year to \$544 million, a smaller fall than the drop in daily rates, reflecting the offsetting effect of improved occupancy. Operators appear to be prioritising occupancy over rate as they compete for a growing but increasingly contested share of visitor demand.
