NEIGHBOURHOOD REPORT

BERAWA.

2025 ANNUAL

REID

LOCATION

Berawa
Tibubeneng, Kuta Utara
Badung Regency, Bali

MARKET BREAK DOWN

Berawa in 2025 is a market in transition, shifting from constrained and competitive to broader and more development-led. Supply has grown across the board, with leasehold assets at 87% of stock, off-plan rising to 21.2%, and apartments now representing 15% of inventory, up from 4% in 2024. That apartment growth is the sharpest compositional change in the market and reflects a deliberate developer pivot toward more compact, accessible product. It also explains the headline median price movement: the annual median has adjusted from \$358k to \$332k, but this is composition-driven rather than a true price decline. Per-bedroom pricing has remained broadly stable year-on-year.

Discount rates have actually tightened to -6% to -7%, and monthly pricing held between \$330k and \$334k all year, both signals pointing to a market that has found equilibrium rather than one under stress. Berawa remains one of the busiest and most recognised locations on the island, and 2025 has reinforced its depth rather than diminished it.

DATA FOR LEASEHOLD VILLAS ONLY

The shift toward compact product is visible in the size data: median 1-bedroom footprints dropped from 67 sqm in 2024 to 47 sqm in 2025 — developers are building to a rental-yield specification rather than a lifestyle one. Larger bedroom types remain consistent with 2024. Lease terms concentrate at 25 to 30 years, with 30-year leases most widely available, a practical positive for investors focused on long-term hold. Annual lease pricing steps from around \$10k for 2-beds to above \$35k for larger configurations, useful when stress-testing yield against the sale prices on page 3.

On the rental side, average occupancy of 58% sits above the Bali market average of 54%, a solid result for investors. Daily rates softened across most bedroom types relative to 2024: 2-beds from \$159 to \$140, 4-beds from \$400 to \$354. The 6-bedroom segment bucked the trend, improving from \$783 to \$848, suggesting premium stock occupies a less contested tier. Occupancy holds up well against the market, but rate softening across mid-range bedrooms is worth factoring carefully into yield projections.
